

Muhammad Huzaifa

Accessibility Tester (Screen Reader User)

Email: huzaiakks444@gmail.com

LinkedIn: <https://www.linkedin.com/in/muhammad-huzaifa-542b9a24b>

Profile

I am a blind accessibility tester and computer science undergraduate specializing in data science, with advanced experience using NVDA on Windows. I conduct usability and accessibility testing of web applications from the perspective of a real screen reader user, focusing on form behavior, keyboard navigation, error handling, focus management, and state announcements.

I have contributed accessibility feedback to real-world applications and academic research projects, providing clear, actionable recommendations that help teams improve inclusive design. My background in computer science enables me to communicate effectively with developers and translate user experience issues into practical technical insights.

Project

Accessibility Review of an Online Learning Web Application

Assistive Technology: NVDA (Windows)

Browser: Google Chrome

Scope

- Registration and login flow
- Form labels and instructions
- Error identification and feedback
- Focus management and state announcements
- Accessibility settings and navigation behavior

Key Findings

- Error messages are not consistently associated with their corresponding form fields
- Successful actions (such as account creation) lack screen reader confirmation feedback
- Toggle controls do not clearly announce on/off states
- Focus resets unexpectedly when navigating away from accessibility settings

Outcome

Accessibility feedback was shared with the application owner and was positively acknowledged as valuable for improving the platform's accessibility and usability for blind users.

Skills Summary

- Screen reader testing (NVDA – advanced)
- Keyboard-only navigation analysis
- Form accessibility and error handling
- Focus management and state feedback
- Accessibility reporting and documentation
- Technical background: Python, SQL, APIs (working knowledge)
